

LOUVERED PANEL RACKING

Free Standing Rack 36" wide

FREESTANDING RACKS Linvar Freestanding Racks are ideally suited to stand beside machines, at ends of bench rows or at any location where sturdy, heavy load capacity storage is required. They can be joined together to form rows and complete single-level installations up to 7 feet high, as shown in (drawing no. 1).

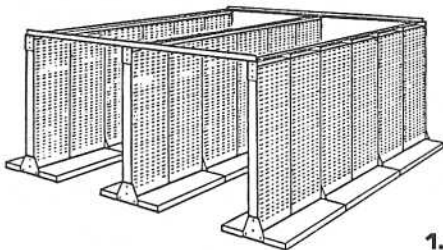

Free Standing Racks are available in 18 inch and 36 inch widths, four heights and in both single-sided and double-sided types. Uprights are formed from 16 gauge mild steel into 4 inch x 2 inch channel sections. Bases are made from 14 gauge mild steel.

MULTI-TIER INSTALLATIONS.

Multi-tier Racking is comprised of Freestanding Racking with modified bases. This racking provides the strength required for extending storage height up to 16 feet (drawing no. 2) and for mezzanine style multi-level installations (drawing no. 3).

Both single-sided and double-sided Multi-tier Racking is available to provide maximum design flexibility, and modular design makes it extremely simple to install.

When Freestanding racks are installed, it should be determined whether or not the racks are to be expanded at a later date. If so, racking 7 feet high should be used in the initial installation. This will permit easy expansion upward to as high as 16 feet or the addition of a mezzanine level while main-

taining complete structural integrity.

Assistance from Linvar's technical staff is required in the design of multi-tier storage facilities more than 7 feet in height. We will conduct a thorough study of your overall operations and objectives, and design the extended height or multi-level facility that best suits your specific needs. In addition to providing maximum storage space utilization, a Linvar system can easily be expanded or reconfigured as requirements change. Linvar also offers a complete installation service.
